# GCSE COMBINED SCIENCE: TRILOGY

Foundation Tier Physics Paper 2F

## Time allowed: 1 hour 15 minutes

#### Materials

For this paper you must have:

- a protractor
- a ruler
- a scientific calculator
- the Physics Equations Sheet (enclosed).

#### Instructions

- Use black ink or black ball-point pen.
- · Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

#### Information

- The maximum mark for this paper is 70.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

|       | Average force =N  |                                    |

### 0 5.6

The rocket aeroplane will fly at a greater height than a jet aeroplane.

The height that an aeroplane flies at affects the radiation dose a passenger will receive each hour.

**Table 2** shows the speed of each aeroplane and the radiation dose a passenger will receive each hour.

| Table 2 |  |
|---------|--|
|---------|--|

| Aeroplane        | Speed in<br>metres per second | Radiation dose each hour in millisieverts |  |
|------------------|-------------------------------|---|--|
| Rocket aeroplane | 8000                          | 0.006                                     |  |
| Jet aeroplane    | 250                           | 0.003                                     |  |

Exposure to ionising radiation has risks and possible consequences.

Evaluate the risks and possible consequences of flying in a rocket aeroplane and in a jet aeroplane.

Assume the same journey is made in each aeroplane.

Use values from Table 2.
